MUKESH BABU. G

Senior Software Engineer | Tungsten Automation | ECM | RPA & AI-Assisted Automation

Bengaluru, India | +91-9443745088 | user_mukesh@yahoo.com | in/mukesh-babu-g | mukeshbabug.github.io

PROFESSIONAL SUMMARY

Senior Software Engineer with 7+ years of experience delivering enterprise content management, intelligent document capture, workflow automation, document generation, and production-support solutions across banking, financial services, insurance, title insurance, real estate, recovery, and claims management, with strong exposure to Canadian insurance operations. Expertise in **Tungsten/Kofax TotalAgility, Kofax Transformation Modules, Import and Export Connectors, Analytics/Insights, Documentum, Automation Anywhere 360, Experlogix Document Automation (Xpertdoc), DMS integrations, and ServiceNow**. Proven in end-to-end solution delivery, production troubleshooting, release and migration support, root-cause analysis, vendor and stakeholder coordination, and mentoring developers supporting business-critical platforms.

TECHNOLOGY STACK

KOFAX TotalAgility | KOFAX Transformation Modules | experlogix | AUTOMATION ANYWHERE

AGILE DELIVERY

- Agile / Scrum
- TFS & Azure DevOps
- ServiceNow ITSM
- Zero Distance Initiative

Certifications &Trainings

- Certified in KTA 7.8 Cognitive Capture Essentials
- Kofax Total Agility 7.6 Essentials
- Verified in Kofax Insights 5.4
- Post Graduate Program in S/w Engineering – Java Tech Stack
- Microsoft Azure Cognitive Services Certification

CORE TECHNICAL SKILLS

- ***Tungsten Automation & ECM:*** Tungsten TotalAgility (TTA), Kofax Transformation Modules (KTM), Import & Export Connector, Analytics/Insights, Documentum 7.11, OCR, document classification, extraction, validation, Scan/VRS, DMS integration.
- ***Experlogix Document Automation:*** Tokenized Word-template development, flat and derived tokens, token-to-template mapping, dynamic document generation, business-rule integration, conditional logic, loops, expressions, and subdocuments.
- ***Automation & AI:*** Automation Anywhere 360, RPA bot support and troubleshooting, Agentic AI concepts, Microsoft Word Add-in and document automation.
- ***Development:*** C#, .NET, JavaScript, SQL/T-SQL, JSON, APIs, TTA forms and workflows, transformation scripts, custom validation and integration logic.
- ***Delivery & Support:*** Production support, incident/problem management, RCA, release/change management, Agile/Scrum, ServiceNow, Jira/TFS, Azure DevOps, UAT, migration support, stakeholder and vendor coordination.
- ***Extended Technical Competencies:*** REST/SOAP and event-driven integrations, queue and batch processing controls, exception handling and retry strategies, data quality/duplicate validation, audit logging and traceability, SQL optimization and reporting views, secure PII document handling, access-control/compliance-focused processing, and release validation with defect triage.
- ***Architecture & Engineering Practices:*** Solution dependency mapping, interface contract definition, configuration and version governance, environment consistency assessment, non-functional requirement analysis, maintainability improvements, technical documentation, and reusable design standards for enterprise apps.

PROFESSIONAL EXPERIENCE

Senior Software Engineer | *First American India, Bengaluru Feb 2024 - Present*

PROJECT DETAILS:

- ***SME Ownership & Platform Support:*** Own critical Tungsten Automation-based workflow development, enhancements, production support, RCA, testing, release execution, and stakeholder requests, and vendor connect for a planned major-version upgrade and migration.
- ***Claims Workflow & Integration Support:*** Provided SME support for claims lifecycle workflows including intake, validation, document processing, closure/cancellation controls, Payments, RPA and downstream integrations.
- ***Secure Document Upload:*** Built a drag-and-drop upload feature for direct in-app submission, avoiding local storage of claimant documents and improving data security.
- ***In-App Communication Enhancement:*** Built an inbuilt rich text editor for in-application communication and document composition, improving usability and reducing dependency on external tools to compose and send emails.
- ***DMS Document Retention Optimization:***Implemented DMS integration to reduce document retention within the KTA database and control database growth. On claim closure, documents are transferred to DMS and can be viewed directly from DMS, while the document reference remains available in KTA without retaining the document binary in the KTA database.
- ***SQL & Data Flow Optimization:*** Improved SQL view logic and processing controls to strengthen data flow quality and prevent invalid downstream submissions.
- ***Production Support Utility Suite:*** Developed reusable tools for user and job reassignment with audit logging, document import and recovery, Scan/VRS processing, and document metadata correction, reducing manual backend work and recurring support effort.
- ***Production Incident Resolution:*** Resolved complex incidents related to integration flows, queue processing, document conversion, reporting, certificate renewals, and monitoring.
- ***AA360 RPA Support***: Supported and troubleshot AA360 bots across multiple business processes; resolved failures caused by UI/MFA changes, browser prompts and external-system issues.
- ***Enterprise Experlogix Document Automation (formerly Xpertdoc):*** Contributed to a JSON-driven document-generation solution integrating application requests, SQL Server stored procedures, .NET business-rule and mapping libraries, and tokenized Word templates. Configured tokens, template mappings, expressions, conditions, loops, and dynamic formatting, with compile, diagnostics, preview, and test-data validation. Supported version-controlled template, shared DLL, and database deployments through Experlogix Document Automation Portal and Azure DevOps pipelines.
- ***AI-Enabled Microsoft Word Add-in:*** Initiated the development of an AI-enabled Microsoft Word Add-in to support intelligent document-template automation, including token mapping, conditional logic, dynamic formatting, data preview, and document generation. The solution is being designed to simplify template programming, improve developer productivity, and provide a more flexible approach to managing document logic directly within Microsoft Word. It also explores AI-assisted capabilities for token suggestions, rule creation, and template validation, with the long-term objective of reducing dependency on Experlogix Document Automation for selected document-generation use cases.
- ***Engineering Standards & Solution Governance:*** Established reusable development patterns, configuration standards, and technical documentation for enterprise automation solutions, improving consistency across environments, simplifying knowledge transfer, and supporting maintainable implementation practices across development and support teams.

Associate | *Cognizant, Chennai | Oct 2019 – Jan 2024*

PROJECT DETAILS:

- ***Enterprise Document Processing Architecture:*** Supported an end-to-end Kofax-based solution that ingested structured, unstructured, and identity documents through Scan, Shared Folder, Fax, Mobile, and API channels. Documents were processed through automated and operator-assisted workflows, then delivered to source systems using Kofax Export Connector with ACK/NACK handling. Job-level reports were accessible through Documentum Webtop.
- ***Workflow, Business Rules & Forms***: Developed and maintained business-process workflows, business rules, manual-activity forms, and custom page integrations to support document-processing operations.
- ***Classification, Extraction & Validation:*** Configured classification and extraction groups for multiple document types, including bulk and bundled documents. Implemented document separation using index- and instruction-based rules, advanced locators, evaluators, validation rules, rejection queues, and coaching logic to improve accuracy and processing efficiency.
- ***Reporting & Analytics***: Supported Kofax Insights reporting and staging tables by validating data loads, resolving reporting discrepancies, and ensuring accurate data flow from operational workflows to reports and dashboards.
- ***Production Support & RCA***: Supported Documentum 7.11 and related ECM components for a US BFSI environment, resolving SLA-based incidents through production troubleshooting, root-cause analysis, and timely corrective actions.
- ***Deployment & Migration:*** Supported application deployments, change requests, firewall and environment configurations, and upgrade or migration activities across development, test, and production environments.
- ***Stakeholder & Agile Delivery:*** Collaborated with business users and technical stakeholders on requirements, scope, testing, releases, and Agile delivery activities.

TRAINING, HACKATHONS & PROFESSIONAL DEVELOPMENT

- ***Xpertdoc & Automation Training:*** Xpertdoc Vendor-Specific Training; Automation Anywhere 360 Foundational RPA Development Training.
- ***Microsoft Enablement:*** Microsoft Azure DevOps Workshop; Microsoft Azure Cognitive Services Training.
- ***Agentic AI Learning & Practice:*** Decoding Agentic AI Training; Pathfinder Training Camp – Multi-Agent Automation Program; Prompt Engineering for Developers.
- ***Community & Hands-on Upskilling:*** Automation Anywhere Agentic AI Hackathon – Participant; GitHub Copilot: Beginner to Pro.
- ***Developing Solutions for Microsoft Azure Labs:*** Built cloud applications using Azure services, including API development, storage integration, and application security management.

EDUCATION

Bachelor of Technology (B.Tech) – Information Technology

Jeppiaar SRR Engineering College, Chennai | Anna University | 2018

Updated: October 2026
